Condition 2: Limited Surface AI

Limited surface AI use declaration

Short declaration and before-and-after sample required

This declaration confirms that AI was used only for surface-level support — spelling, grammar, clarity, formatting, transcription, or approved accessibility support. It was not used to generate ideas, structure, analysis, code, or other substantive content. Your assessor may ask you to explain or discuss your work.

Part A: Student Details

Student name: *Jasanjot Singh*

Student number: *S4093354*

Course code and name: *COSC2536: Security in Computing and Information Technology*

Assessment number & title: Assignment 2

Date submitted: 18/10/2026

Part B: AI Use Declaration

Complete all fields below. If you did not use any AI tool, select the statement below and you do not need to complete the remaining fields.

☒ I did not use any AI tool in the preparation or submission of this assessment.

☐ I have used AI for surface-level support. Here are the details of my use.

1. Name of the AI tool(s) used:

e.g. Grammarly, ChatGPT, Microsoft Editor

2. What specifically did you use the AI tool for?

e.g. spelling and grammar checks on the final draft; sentence clarity in the discussion section

3. Confirm the scope: what did the AI tool NOT do?

e.g. It did not generate ideas, arguments, analysis, code, or substantive content. All ideas and content are my own.

Part C: Declaration

Select all that apply and sign below.

☐ I used AI only for permitted surface-level support (spelling, grammar, clarity, formatting, transcription, or approved accessibility support).

☒ I did not use AI to generate ideas, structure, arguments, analysis, code, or other substantive content.

☐ The before-and-after sample I have provided accurately represents how I used the AI tool.

☒ I understand that my assessor may ask me to explain or discuss my work, and that I am expected to be able to do so without reference to AI-generated material.

☒ I understand that submitting AI-assisted work beyond the permitted scope, or failing to declare AI use where required, may result in a mark reduction or referral for academic integrity review.

☐ Any suspicious or unexplained AI-generated content or code may be flagged by the marker, and you may be invited to a face-to-face interview or demonstration to verify your understanding and authorship of the submitted work. For each question or section that is flagged, the interview will focus specifically on that suspected question or section. The original marking rubric for that question or section may be replaced by the interview-based rubric below, and your responses during the interview will be used to assess your understanding and authorship of the submitted work.

Signature: Jasanjot Singh

Date: 18/10/2026

> *Reminder: A vague declaration is not sufficient. 'I used AI to improve my assignment' does not tell the marker what the AI did or whether it stayed within the permitted scope. Be specific about the tool, the task, and what changed — and what did not change.*

Rubic

Criterion	Excellent	Satisfactory	Limited	Unsatisfactory
Understanding and explanation of submitted work	Clearly and accurately explains the purpose, logic, code, algorithms, key components, and important	Explains most major parts correctly with only minor gaps or prompting.	Provides partial explanations and shows uncertainty about important parts of the submission.	Cannot explain significant parts of the submitted work or provides explanations

Criterion	Excellent	Satisfactory	Limited	Unsatisfactory
	implementation decisions in the submitted work.			inconsistent with the submission.
Ability to answer technical questions	Correctly answers questions directly related to the concepts, methods, security assumptions, testing, or implementation used in the submission.	Answers most questions correctly but may require some clarification or prompting.	Can answer only basic questions and struggles with questions directly related to the submitted work.	Unable to answer fundamental questions about the submitted work.
Consistency with submitted work	Explanations, terminology, implementation details, and claimed results are fully consistent with the submitted work.	Mostly consistent, with only minor discrepancies that can be reasonably explained.	Several inconsistencies exist between the submitted work and the student's explanations.	Major inconsistencies indicate that the student cannot reasonably account for significant parts of the submitted work.
